Location: Trivandrum, Kerala, IN Phone: +91-638-38-90464 E-mail: raseefazeez@gmail.com

SUMMARY

Cloud Infrastructure & DevOps Engineer with 11 years of IT experience, including 5+ years focused on AWS cloud infrastructure, IAM, automation and cloud operations. AWS Certified Solutions Architect – Associate with experience in Terraform, AWS CloudFormation, GitHub Actions and OIDC-based authentication. Experienced in multi-account AWS environments, infrastructure automation, identity integration, CI/CD workflows and production troubleshooting. Hands-on project experience with Docker, Kubernetes, Helm and observability tools. Focused on secure, reliable and repeatable cloud infrastructure.

TECHNICAL SKILLS

AWS Cloud: EC2, S3, Lambda, API Gateway, CloudFront, DynamoDB, Cognito, IAM, IAM Identity Center, Organizations, CloudWatch, VPC and Route 53.

Infrastructure as Code: Terraform, AWS CloudFormation, infrastructure provisioning and configuration automation.

CI/CD & Automation: Git, GitHub Actions, OIDC federation, Bash, Shell scripting and automated deployment workflows.

Containers & Orchestration: Docker, Kubernetes (Kind), Helm, container networking, health probes and workload troubleshooting.

Identity & Security: IAM, SSO, SAML, OAuth 2.0, JWT, ABAC and least-privilege access.

Monitoring & Networking: CloudWatch, Prometheus, Grafana, VPC networking, load balancing, Auto Scaling and Multi-AZ architecture.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate (SAA-C03) | Issued May 2024 Valid till May 2027

PROFESSIONAL EXPERIENCE

UST — Cloud Infrastructure Associate Trivandrum, India | Feb 2021 – Aug 2026

Client: Aptia Group — DevOps & Cloud Operations | October 2025 – August 2026

- Supported CI/CD automation and deployment workflows using GitHub Actions, improving release consistency across cloud environments.
- Contributed to infrastructure automation and containerization initiatives, reducing repetitive manual operational effort by approximately 25%.
- Supported AWS cloud operations, infrastructure troubleshooting and continuous improvements to deployment workflows.
- Worked on Amazon AppStream 2.0 access and performance-related issues, collaborating on operational improvements.

Client: Wolters Kluwer — Cloud Infrastructure & Automation | Feb 2021 – Sept 2025

- Developed and maintained Terraform and CloudFormation automation to standardize AWS infrastructure provisioning.
- Integrated Microsoft Entra ID (Azure AD) SSO with AWS IAM Identity Center, contributing to a 30% reduction in identity-related support incidents.
- Supported AWS Organizations, multi-account operations, IAM and access governance.

- Contributed to an internal self-service cloud operations platform, enabling users to check Amazon WorkSpaces status and initiate reboot operations.
- Applied least-privilege access principles and automation to improve provisioning consistency and reduce repetitive administration.

PERSONAL PROJECTS

RaaS 2.0 — Reboot as a Service — Asynchronous Cloud Operations Platform

Docker | Kubernetes | Helm | Redis | AWS | Prometheus | Grafana | Terraform

- Designed an asynchronous application architecture comprising an API service, Redis/BullMQ job queue and dedicated worker service.
- Containerized application components with Docker and deployed them locally using Kubernetes (Kind), implementing readiness and liveness probes.
- Implemented monitoring using Prometheus and Grafana; tested workload failures, service connectivity and recovery behavior, including Redis and worker availability.
- Deployed the frontend using Amazon S3 and CloudFront with Amazon Cognito authentication; developing API token validation and team-based authorization.

GitHub: https://github.com/RaseefAzeez/raas-v2

RaaS 1.0 — Reboot as a Service — Serverless Cloud Operations

AWS Lambda | API Gateway | Cognito | DynamoDB | Terraform | GitHub Actions

- Designed a serverless self-service platform for controlled EC2 lifecycle operations using AWS managed services.
- Implemented Cognito authentication, JWT-based authorization and attribute-based access control using user groups and EC2 resource tags.
- Automated infrastructure deployment using Terraform and GitHub Actions, integrating AWS through OIDC federation without long-lived access keys.

GitHub: https://github.com/RaseefAzeez/RaaS

Personal Web Platform — Serverless AWS Deployment

Amazon S3 | CloudFront | API Gateway | Lambda | DynamoDB | CloudFormation

- Built and deployed a serverless personal portfolio using AWS managed services.
- Automated infrastructure provisioning and deployment using CloudFormation and GitHub Actions with OIDC-based AWS authentication.
